Additional Info

Do you require IFPS certification?

No

Do you offer internships?

Yes

What technology or markets do you focus on?

In partnership with our customers, we provide high-performance components and solutions with great value for a broad range of mobile equipment applications. As a global leader in mobile and industrial hydraulics and fluid conveyance, we design, manufacture and provide a complete range of engineered components and solutions.

Describe your company culture

Transforming energy into action

It's not just our name. It's what we do! Providing power to transform the world in an energy-efficient and sustainable way!

Through our leading technology and application knowledge, we enable our customers to better serve their end-customers.

Throughout our history, we've built a ground-breaking legacy in hydraulics. Today, we engineer innovative products and solutions for optimum performance of mobile

equipment, regardless of the technology, with seamless integration of electronics, electric driving power and hydraulics.

We continue to make significant investments in technology and digitalization to meet our customers' needs and exceed their expectations.

Your strongest partner

With Eaton Hydraulics becoming a part of Danfoss Power Solutions, we now have the broadest selection of mobile and industrial hydraulics products and solutions available in the market. We also have thousands of experts focused on changing hydraulics through the power of innovation and strong partnerships with our customers. The combination of our two businesses increases our engineering expertise and capabilities, further strengthening our comprehensive approach to innovation and application development.

With an expanded local presence around the world, we will be the strongest partner for our customers globally. Our Application Development Centers (ADCs) and our mobile Dynamic Machine Control Experiences (DMCs), allow us to fully demonstrate our application expertise. The development and testing facilities minimize risks, reduce costs and design cycle times, thus saving our customers money and accelerating speeding up the critical time-to-market.
